

Household handwasher for emergencies

Washing hands with soap can reduce the risk of diarrhoeal diseases by at least 42%.

In emergencies, the BushProof handwasher helps achieve this.

- ▶ **High visibility**
Logo printing is possible creating high visibility.
- ▶ **Longer term impact**
Nozzle fits most plastic bottles so reusable in the long term.
- ▶ **Rapid response**
Container is collapsible enabling rapid shipping and distribution.

- ▶ **Maximum impact**
Low unit cost allows for household distribution, making a huge humanitarian impact possible with a limited budget.
- ▶ **Water saving**
The low flow rate of 2 litres in 16 minutes is enough for handwashing but does not waste scarce water.

The importance of handwashing

Handwashing with soap is known to be the most effective stand-alone practice for reducing incidence of diarrhoea, being more effective than either water or sanitation interventions. Yet it is the water and sanitation interventions that usually take priority, especially in an emergency, while hygiene promotion tends to take second place.

Household use

The BushProof handwasher has been designed for use by a single family at the household level.

Available containers to make tippy-taps or leaky tins may not be immediately available for rapid distribution in an emergency. The BushProof handwasher provides a neat solution since it is a collapsible container and therefore easily transported and distributed.

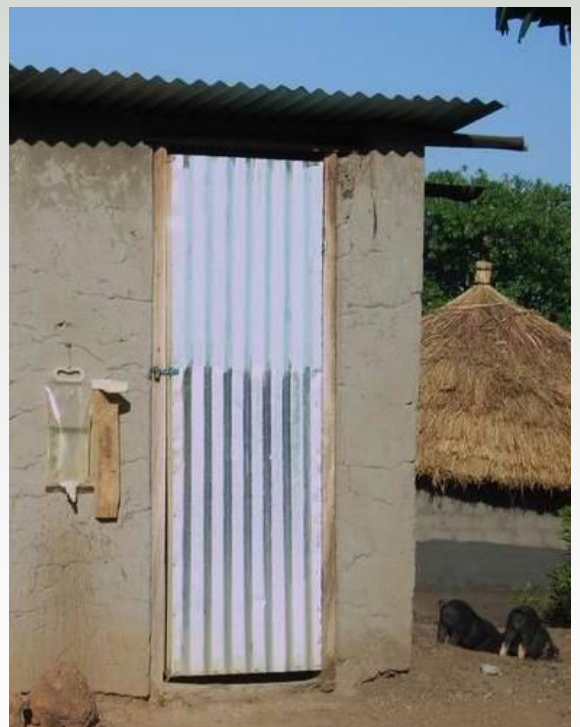

This is because the dispenser is more likely to be refilled by those who use it, but also because most of the 'critical times' for handwashing occur in the home itself rather than only at the toilet, which is often located at a distance. Such times include before eating, before preparing food and after cleaning children.
